

Universal Cash Management (UCM) for MoniSafe 400A

Solutions for the MoniSafe™ 400A

The **Compuflex Corporation** developed a suite of software products for use with **Hyosung's MoniSafe™ 400A**: MoniCash-SA, MoniCash, and UCM.

Like all **Compuflex** products, our solutions maximize the functionality and features of supported cash handling products.

What is Universal Cash Management (UCM)?

Universal Cash Management provides developers with a standard set of functions to minimize the time required to integrate any cash dispenser or recycler including, the **Hyosung MoniSafe™ 400A** recycler, with their teller software. This unique software facilitates “higher-level” function calls (e.g., deposits and withdrawals) which are generic. This eliminates the need to tailor each function call specifically to the device. **UCM** is highly scalable and can be deployed to support a single **Hyosung MoniSafe™ 400A** or multiple devices at an enterprise level.

UCM Specific Features for the Hyosung MoniSafe™ 400A

The **Hyosung MoniSafe™ 400A** supports one of the largest note capacities in the market. Included among its 7 recycleable cassettes is a Utility cassette (i.e., “overflow” cassette) . **UCM** provides the functionality necessary to support the **MoniSafe™ 400A's** unique features such as:

Audit	Verifies the bills in any of the active cassettes.
Auto Inventory Load	Eliminates manual bill-by-bill load to save time and enhance security.
Denomination Overflow	Manages denominations through the ability to store bills that can no longer be handled by a cassette (e.g., manage the overflow of \$1 bills).
Note Transfer	Supports the ability to selectively transfer bills from a “recyclable” cassette to the “overflow” cassette.

Denomination Redistribution	Redistributes “overflowed” notes or notes that have been transferred from “recyclable” cassettes into an alternate cassette.
Safekeeping	Supports the redistribution of bills in the device's inventory into the Utility cassette, ultimately allowing for the removal of the cassette for secure vault storage.
Storage	Acts as a secure storage device for bills that will not be recycled.

UCM Core Features:

All **Compuflex Corporation's** solutions are designed with a core set of standard features to service all users' needs.

UCM simplifies the process by offering:

- Enhanced Security – UCM provides an additional layer of protection that extends beyond the built-in security available with the **Hyosung MoniSafe™ 400A**. Features such as duress dispense mixes and system lockouts are quickly and easily configured.
- Cash Position Management – UCM in conjunction with additional components allows the user to monitor and maintain all cash device totals.
- Inventory Management – This can be performed at the branch or enterprise level. Detailed inventory information is readily available in “real-time”.

UCM Simplified:

UCM is a flexible, “universal” solution that partners with other software such as teller packages. It provides these packages with the capability to fully access and control a host of cash automation devices. Developers can implement this solution by using UCM's pre-designed forms, or designing forms that coincide with the “look and feel” of the existing application.

Enhanced Features:

- Coin – supports coin dispensers
- Transactional Data – interface returns detailed information for each transaction
- Detailed Reporting – provides detailed reports on all cash in and cash out activities
- Balancing – integrates teller balancing into the teller platform software eliminating dual entry for end-of-day reconciliation
- Bill Mix – support “real-time”, dynamic bill mix
- Monitoring – integrates with **CashView Insight**, a powerful inventory management tool

Our Company

The Compuflex Corporation has been providing cash automation solutions since 1983. We deliver solutions that **MANAGE, OPTIMIZE** and **INTEGRATE** cash automation. We have the flexibility and expertise to provide solutions to any market dealing with cash; nationally and globally.

At **The Compuflex Corporation**, we are committed to our customers through our extensive product offering, customized solution design and development, in-house and on-site training programs, and dedicated support staff. We welcome the opportunity to be your cash automation integration partner.
