

2X1K

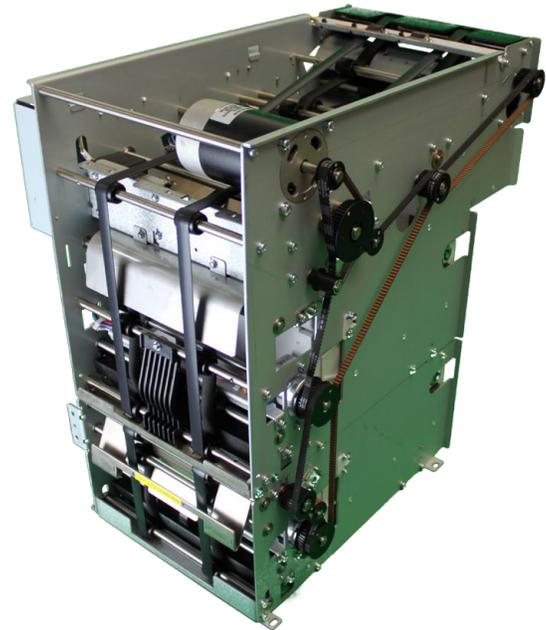

MAXIMUM FLEXIBILITY.

You asked and we delivered. The retail ATM market is in a state of constant change and your hardware needs to be able to change along with the market. The **2X1K** CDU provides the US ISO and IAD with a range of installation and configuration options to suit the needs of each location. The new CDU, combined with the denomination selection, another retail-industry first, gives your customers a better user experience and gives you more opportunity for lower cost and higher profit.

LOWER-COST DUAL DENOMINATION

Have you ever wanted to offer multidenomination but the location's foot traffic wouldn't justify a 4K CDU? The Dual 1K Note Dispenser (**2X1K**) is your answer. The **2X1K** CDU offers two 1,000-note cassettes that can be configured for any denomination, maximizing your deployment flexibility. This allows multidenomination at a much lower cost.

REDUCE YOUR COST AND MAXIMIZE YOUR REVENUE

Not only is the **2X1K** a lower-cost option for multidenomination, but it can lower your cost of cash as well. Operators report that offering denominations in addition to \$20 bills actually lowers the average overall withdrawal amounts. For example, customers looking for \$50 are forced to withdraw \$60 in a single cassette ATM. The **2X1K** enables the \$50 transaction, increasing your margin on that transaction: same surcharge and interchange with lower cash consumption.

IMPROVE YOUR CUSTOMER EXPERIENCE WITH DENOMINATION SELECTION

Cardholders love choice and you can now deliver. Along with the development of the **2X1K**, we can now offer the additional benefit of denomination selection. This has been a very popular feature on our high-end FI ATMs and it will now be available on all of our multidenomination retail models.
